Objectives

The Role of Pharmacy in the Institutional Diversion Program ■ State the impact of diversion by healthcare personnel on patient and staff safety ■ State signs of diversion and impairment ■ Describe common controlled substance related gaps in the pharmacy ■ Describe the process to improve security of controlled substance handling and reduce opportunities for diversion ■ Describe how to address and report suspicion of diversion

Anticoagulation Management with the DOACs: Real Life Vignettes ■ Recognize the available literature regarding use of DOACs in with extremes of body weight ■ Review the mechanism of action of Idarucizumab (Praxbind) and apply the newest FDA approved reversal agent to a clinical case in a patient receiving dabigatran ■ Recall the mechanism of action, pharmacokinetics, and the recent updates from the FDA on Andexanet-alpha for reversal of Factor Xa inhibitors

Resident Clinical Pearls ■ Describe the optimal time in which to administer antihypertensive medication ■ Assess whether or not prazosin may be an appropriate treatment for PTSD in your patient ■ Describe how the 2016 HAP/VAP Guidelines will impact current practice ■ Identify what medications can prolong the QT interval ■ Describe the role of magnesium in migraine prophylaxis ■ Discuss appropriate strategies for prevention and treatment of opioid-induced hypogonadism ■ Describe the role of patirromer (Veltassa) and sodium zirconium cyclosilicate (ZS-9) in current practice for hyperkalemia management

Speakers will disclose any potential conflicts of interest or affiliations during the program
